## ACTIVRAC® BOOSTS CANNABIS YIELDS

Optimizing space and maximizing profit

For more than 45 years, Spacesaver has helped businesses save space while keeping materials organized and protected. Now Spacesaver's innovative technology is being used by indoor growers in the cannabis cultivation industry.

One example is this facility in the San Francisco Bay Area, where staff are using Spacesaver's ActivRAC® Mobilized Storage System to gain significantly higher yields in the flowering rooms. Originally designed for heavy-duty industrial applications, these ActivRAC systems are 42 feet long and consist of two levels of shelving mounted on "carriages" that move along rails installed along the floor.

The ActivRAC systems eliminate wasted space, encourage airflow, and allow for optimal light exposure, which maximizes the plants' bud formation. Mechanical-assist handles allow staff to easily open aisles so they can tend the plants, and the aisles are wide enough for staff to work on both sides of each growing area.

One ActivRAC system was initially installed in a single room, and the increased yields in that room justified new ActivRAC systems in additional rooms. In each case the local Spacesaver distributor worked with staff to minimize disruption and downtime, timing the ActivRAC installations to coincide with the end of each room's harvest.
