

PRODUCT CATALOG: LIBRARY MEDIA DISPLAY SHELVING

Spacesaver's media display shelving systems are fully configurable units designed to display and store books, DVDs, CDs, and periodicals.

A wide variety of interchangeable shelving options allows library professionals to quickly and easily transform the units' function and appearance. From browsing bins to zig-zag display shelving, the units are designed to encourage browsing, provide storage, and offer prominent display for new books, periodicals, and other media.

The system's versatility extends beyond shelving options to include choices regarding mobility, sizing, and finishes. These units are offered in single-faced and double-faced options in a variety of sizes, from a 3.5-foot height that's perfect for children up to a 5.5-foot height that can accommodate a large number of materials while maintaining an attractive display. Casters are available to create mobile carts, or single-sided units can be placed against a wall for stationary applications. All units are finished with durable powder-coat paint in any of Spacesaver's range of colors. End panels complete the look and are available in standard colors -- or custom end panels can be specified for complete integration with a library's interior design.
