HEAVY-DUTY MUSEUM STORAGE

Saving space and protecting artifacts and specimens, no matter the size

Sometimes a museum's mission to protect and preserve artifacts, artwork, or natural history specimens results in the need to store a variety of exceptionally large or heavy objects. These objects can be cumbersome, but Spacesaver is here to help. Local museum planning consultants can design compact mobile storage systems to optimize space and keep large objects organized and protected, just as they would for a typical museum collection. Spacesaver's mobile systems eliminate empty aisles to promote the efficient use of space while also maintaining the highest standards of organization, accessibility, and preservation.

Industrial-strength mobile systems optimize space for even the heaviest museum objects.

In addition to compact mobile systems, Spacesaver offers a range of other heavy-duty museum storage solutions, including widespan shelving and custom solutions like the industrial cantilever racking pictured above. As with all our museum offerings, these products are coated in non-off-gassing powder-coat paint and are engineered for safety and ease of access.

Spacesaver's partnership with our distribution network delivers a complete and unique customer service experience, with local planning and installation expertise backed by in-house teams of engineers, project managers, and manufacturing professionals.
